Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

138450 chemokine (C-C) receptor 2, splice form A - human Cispecial Homostine (C-C) receptor 2, splice form A - human Cispecial Homosapiens (T-C CGR-2; monocyte chemoattractant protein 1 receptor; monocyte chemosises (Special Homosapiens) (T-C CGR-2; monocyte chemoattractant procession: 138450 (T-C CGR-2) 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             G protein-coupled receptor CKR-L1 - human

O protein-coupled receptor CKR-L1 - human

NiAlternate names: chemokine receptor-like protein TER1; GPR-CY6

C;Species: Homo sapiens (man)

C;Date: 31-Jan-1997 #sequence revision 31-Jan-1997 #text_change 21-Jul-2000

C;Accession: JC5067; G02776; G02387

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

             increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-bet and rantes and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation. Acts as co-receptor with CD4 for primary nonsyncytium-inducing strains (NSI) (macrophage-tropic) of HIV-1 virus. It promotes Env-mediated fusion of the virus.
-:- SUBCELIULAR LOCATION: Integral membrane protein.
-:- TISSUE SPECIFICITY: Found in promptleocytic cells.
-:- PTM: SULfation contributes to the efficiency of HIV-1 entry.
-:- PTM: Modified by O-linked glycosylation, but not by N-linked
                                                                                                                                                                                                                                                                                                                                                                                         Farzan M., Mirzabekov T., Kolchinsky P., Wyatt R., Cayabyab M.,

AR Zhang Y.-W., Ryder O.A., Zhang Y.-P.;

RT Sequence evolution of the CCR5 chemokine receptor gene in primates.";

RT Sequence evolution of the CCR5 chemokine. Binds to MIP-1-alpha, and Biol. Evol. 16:1145-1154(1999).

CC -!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, and PANTES and Subsequently transduces a signal by cc increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.

CC -!- SUBCELLULAR LOCATION: Integral membrane protein.

CC -!- SUBCELLULAR LOCATION: Integral membrane protein.

CC -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

-!- FUNCITON: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

Submitted (NOV-1997) to the EMBL/GenBank/DDBJ databases.
-1- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RAWIES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
INTP-1-beta and RANTES and subsequently transduces a signal by
Increasing the intracellular calcium ions level. May play a role
in the control of gramulocytic lineage proliferation or
differentiation.
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- SUBCELULIAR LOCATION: Integral membrane protein.

Biol. Evol. 16:1145-1154(1999).

-!-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-bet and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or

-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-abha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

"Chemokine receptor expression in cultured glia and rat experimental allergic encephalomyslitis.";
"Chemokine receptor expression in cultured glia and rat experimental allergic enceptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-bera and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level.
-: SUBCELLULAR LOCATION: Integral membrane protein.
-: SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Eur. J. Immunol. 28:582-588(1998).

-!- FUNCTION. Receptor for the chemokines SCYA1/I-309, SCYA4/MIP-1-beta and SCYA1/TARC. May regulate monocyte chemotaxis and thymic cell line apoptosis. Alternative coreceptor with CD4 for HIV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                          SEQUENCE FROM N.A.

Hum. Retroviruses 17:981-986 (2001).

-!- FUNCTION: Receptor for the chemokines SCYA1/I-309, SCYA4/MIP-1-beta and SCYA1/TARC. May regulate monocyte chemotaxis and thymic call line apoptosis (By similarity).
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Eutheria, Primates, Catarrhini, Cercopithecidae, Cercopithecinae, Macaca.
